Trends It's all about **Buzzwords** 「趨勢」亦或「流行語」？ Web 3.0, Cloud Computing, Social Network, Big Data,

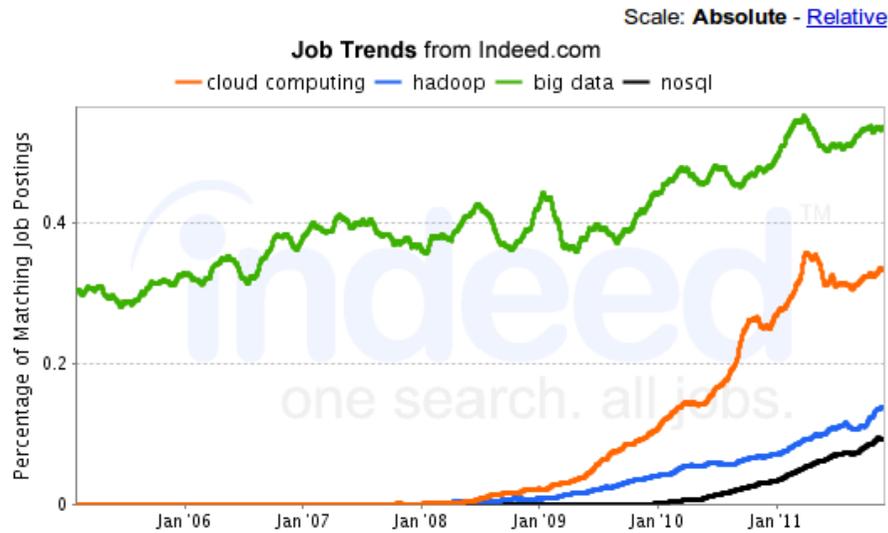

語意網 (Semantic Web) 從 2001 年開始制定標準後，逐漸下滑。而同義詞 Web 3.0 也呈現相似趨勢。巨量資料 (Big Data) 與其關鍵技術 Hadoop，則仍在上揚中。

整體而言，雲端運算 (Cloud Computing) 與社交網路 (Social Network) 呈現上揚。且社交網路比雲端運算還引人注目。

What is Big Data?! 何謂『巨量資料』？

巨量資料泛指資料大小已無法用一般軟體擷取、管理與處理；
單一資料集大小介於數十 TB 至數 PB 的資料。

'Big Data' = few dozen TeraBytes to PetaBytes in single data set.

Definition

[edit]

Big data is a term applied to data sets whose size is beyond the ability of commonly used software tools to capture, manage, and process the data within a tolerable elapsed time. Big data sizes are a constantly moving target currently ranging from a few dozen terabytes to many petabytes of data in a single data set.

In a 2001 research report^[14] and related conference presentations, then META Group (now Gartner) analyst, Doug Laney, defined data growth challenges (and opportunities) as being three-dimensional, i.e. increasing volume (amount of data), velocity (speed of data in/out), and variety (range of data types, sources). Gartner continues to use this model for describing big data.^[15]

FORTUNE -- The unemployment rate in the U.S. continues to be abysmal (9.1% in July), but the tech world has spawned a new kind of highly skilled, nerdy-cool job that companies are scrambling to fill: data scientist.
