Trends It's all about **Buzzwords** 「趨勢」亦或「流行語」？ Web 3.0, Cloud Computing, Social Network, Big Data,

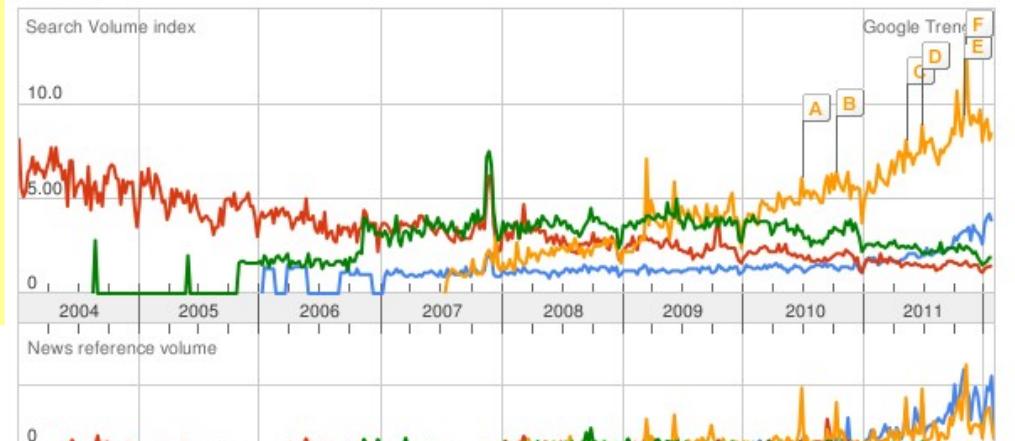

語意網（ Semantic Web ）從 2001 年開始制定標準後，逐漸下滑。而同義詞 Web 3.0 也呈現相似趨勢。海量資料（ Big Data ）與其關鍵技術 Hadoop ，則仍在上揚中。

- Scale is based on the average worldwide traffic of **big data** in all years. [Learn more](#)
- An improvement to our geographical assignment was applied retroactively from 1/1/2011. [Learn more](#)

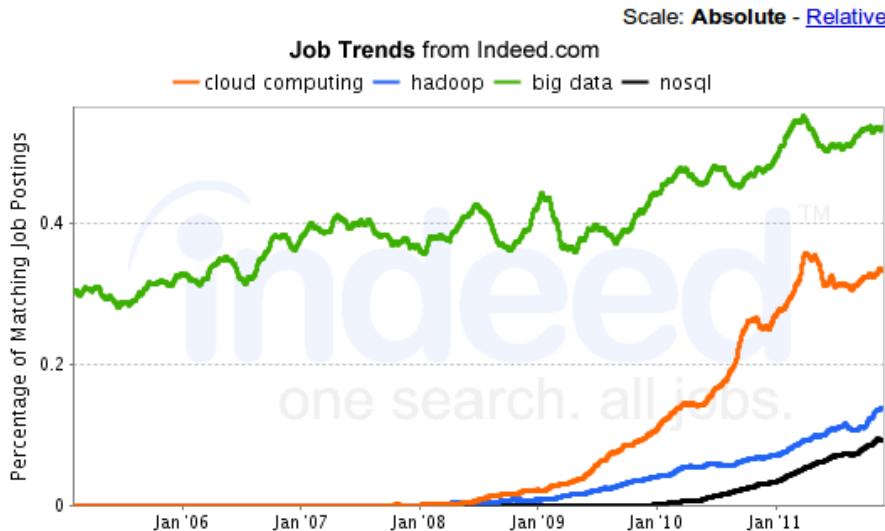

big data — 1.00 semantic web — 3.30 hadoop — 2.50
web 3.0 ■ 2.40

整體而言，雲端運算（ Cloud Computing ）與社交網路（ Social Network ）呈現上揚。且社交網路比雲端運算還引人注目。

What is Big Data?! 何謂『海量資料』？

海量資料泛指資料大小已無法用一般軟體擷取、管理與處理；
單一資料集大小介於數十 TB 至數 PB 的資料。

'Big Data' = few dozen TeraBytes to PetaBytes in single data set.

Definition

[edit]

Big data is a term applied to data sets whose size is beyond the ability of commonly used software tools to capture, manage, and process the data within a tolerable elapsed time. Big data sizes are a constantly moving target currently ranging from a few dozen terabytes to many petabytes of data in a single data set.

In a 2001 research report^[14] and related conference presentations, then META Group (now Gartner) analyst, Doug Laney, defined data growth challenges (and opportunities) as being three-dimensional, i.e. increasing volume (amount of data), velocity (speed of data in/out), and variety (range of data types, sources). Gartner continues to use this model for describing big data.^[15]

每個人都在猜，下一波網路革命是什麼？每個人都在猜，未來的世界會如何運作？Google的資深副總Amit Singhai透露了一點訊息。「Google正努力從『單字』層面進展到『意義』層面，未來搜尋引擎提供的不只是關鍵字搜尋，搜尋引擎甚至會『明白』你到底要什麼。」

Data Scientist !! 資料科學家 !!

Data scientist: The hot new gig in tech

By Michal Lev-Ram, writer September 6, 2011: 5:00 AM ET

Companies that want to make sense of all their bits and bytes are hiring so-called data scientists - if they can find any.

FORTUNE -- The unemployment rate in the U.S. continues to be abysmal ([9.1% in July](#)), but the tech world has spawned a new kind of highly skilled, nerdy-cool job that companies are scrambling to fill: data scientist.

會「統計」的人照過來！
