# The GridWay Meta-Scheduler

## *Globus Execution Services Session*

**Ruben S. Montero**  
**[dsa-research.org](http://dsa-research.org)**

***Open Source Grid & Cluster***

Oakland CA, May 2008

# What is GridWay?

*The GridWay meta-scheduler is a scheduler virtualization layer on top of basic Globus services (GRAM, MDS & GridFTP)*

## **For the user**

- A LRM-like environment for submitting, monitoring, and controlling jobs

## **For the developer**

- An standard-base development framework for Grid Applications

## **For the sysadmin**

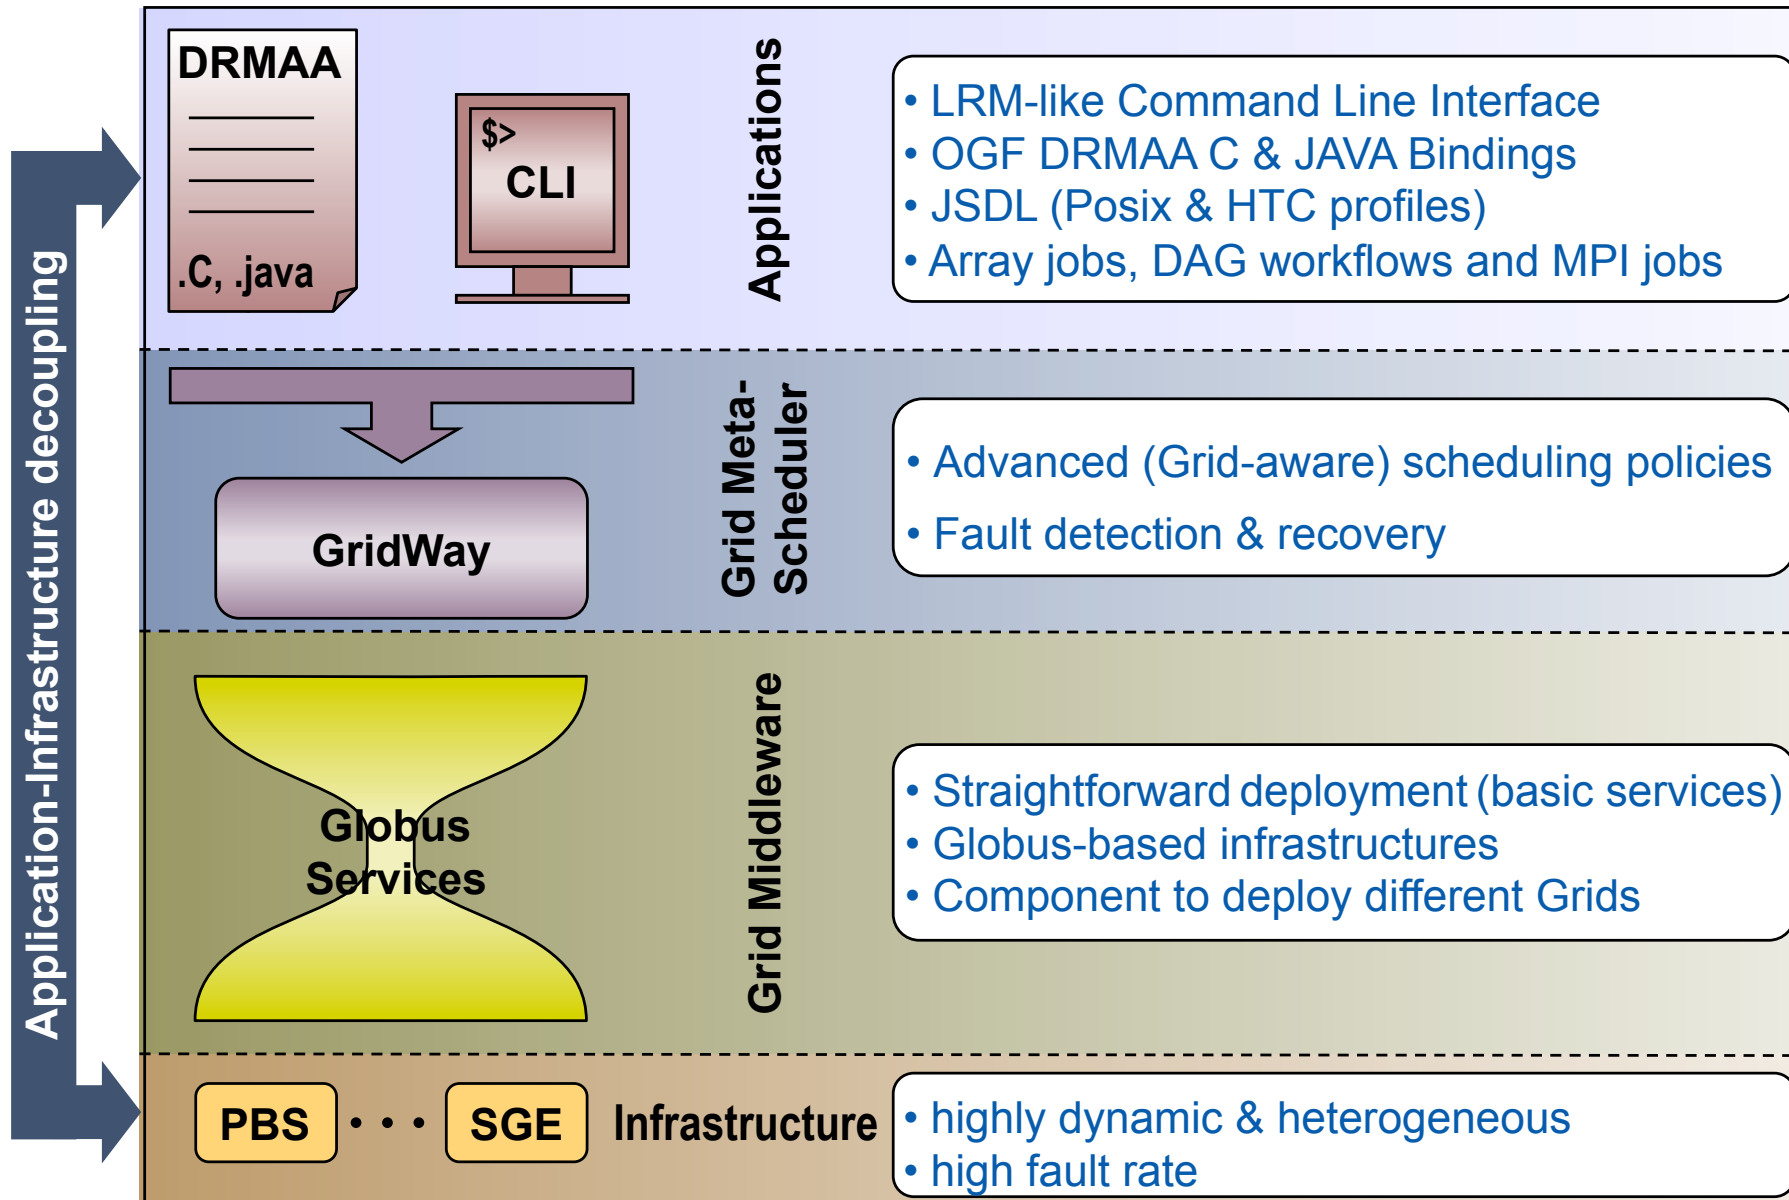

- A policy-driven job scheduler
- User-side Grid Accounting

## **For the Grid architect / solution provider**

- A modular component to use different infrastructures
- A key component to deploy different Grids

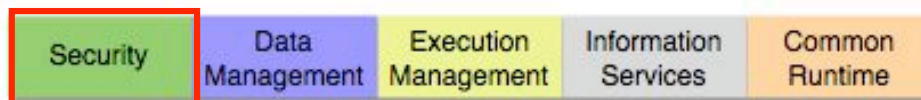

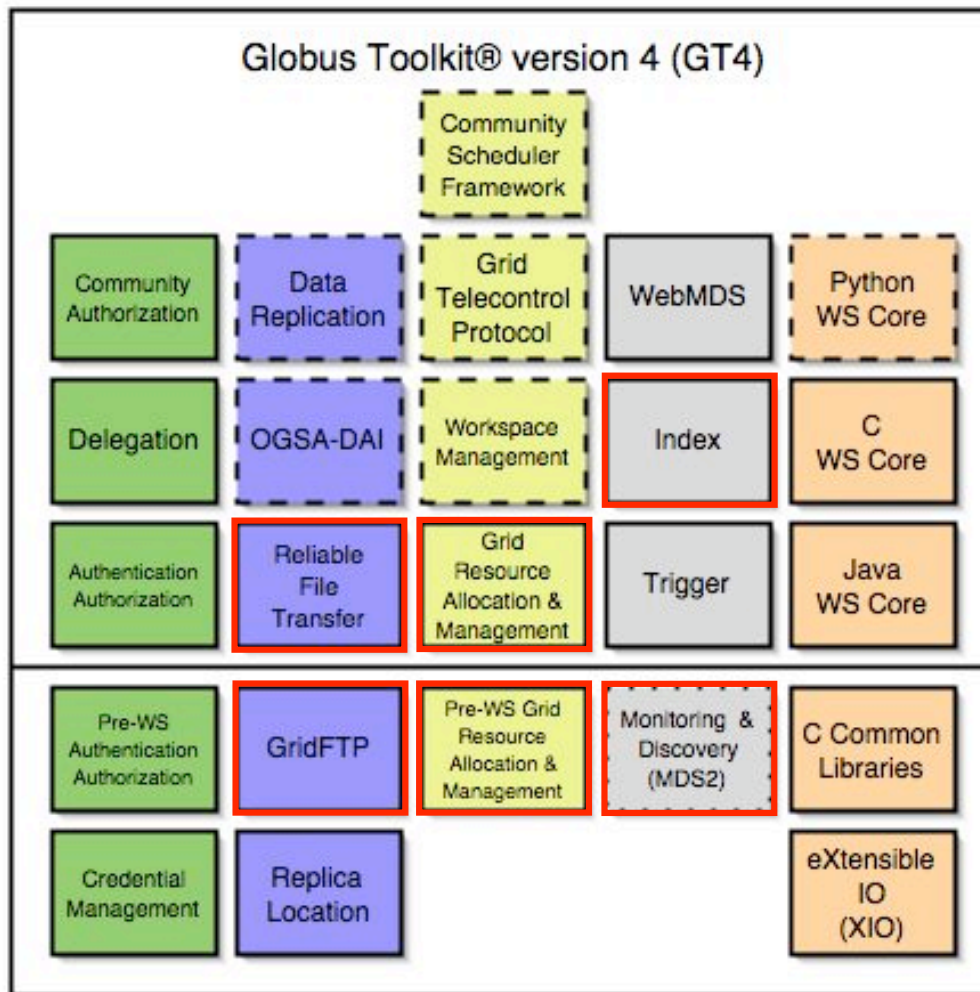

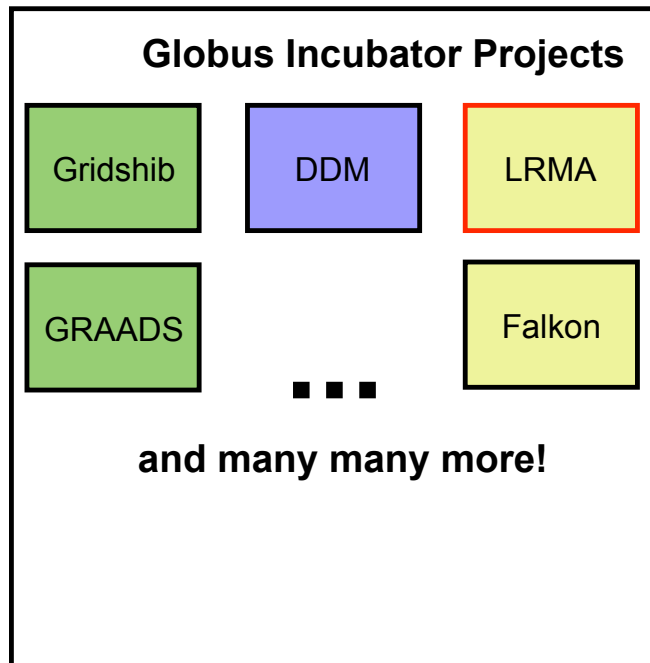

# What is GridWay?

# What is GridWay?

# Scheduling Policies

## Resource Policies

- Rank Expressions
- Fixed Priority
- User Usage History
- Failure Rate

**Grid Scheduling = Job + Resource Policies**

## Job Policies

- Fixed Priority
- Urgent Jobs
- User Share
- Deadline
- Waiting Time

## Pending Jobs

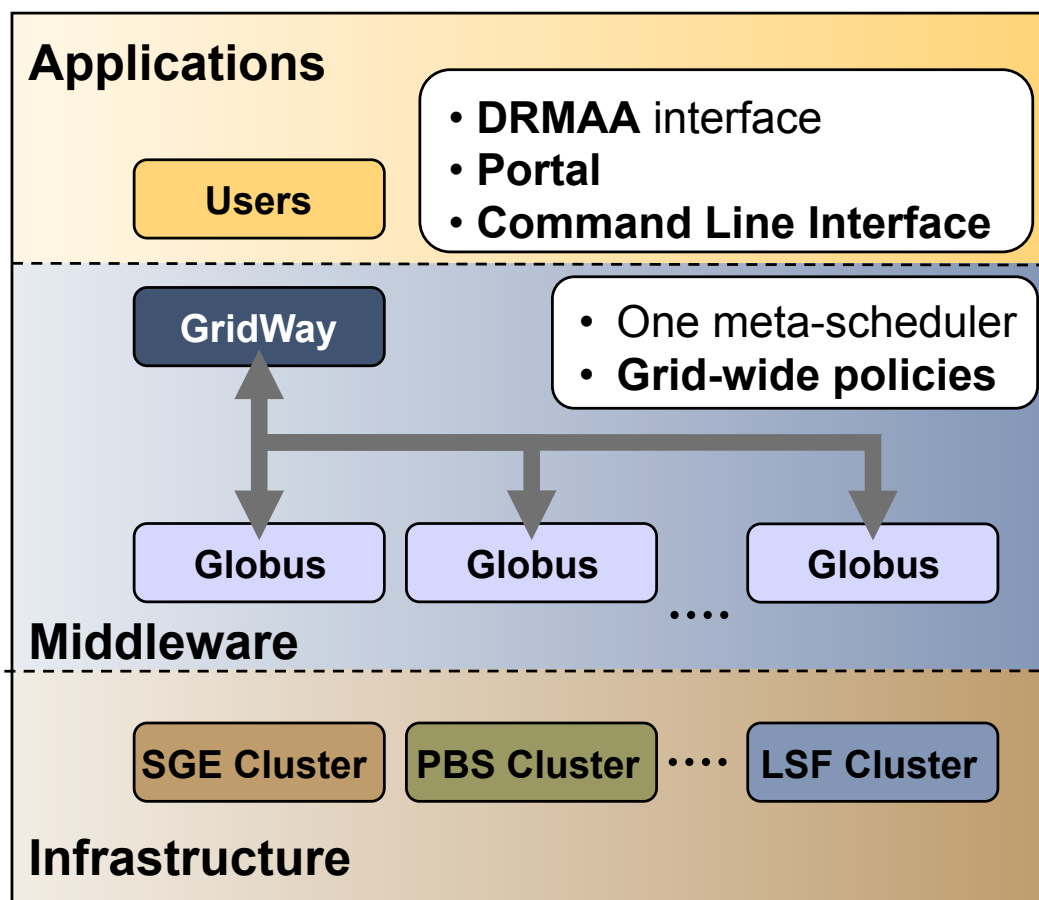

## Matching Resources for each job (user)

# Enterprise Grids

## Architecture

## Examples

### European Space Astronomy Center

- Data Analysis from space missions
- DRMAA

### UABGrid, University of Alabama

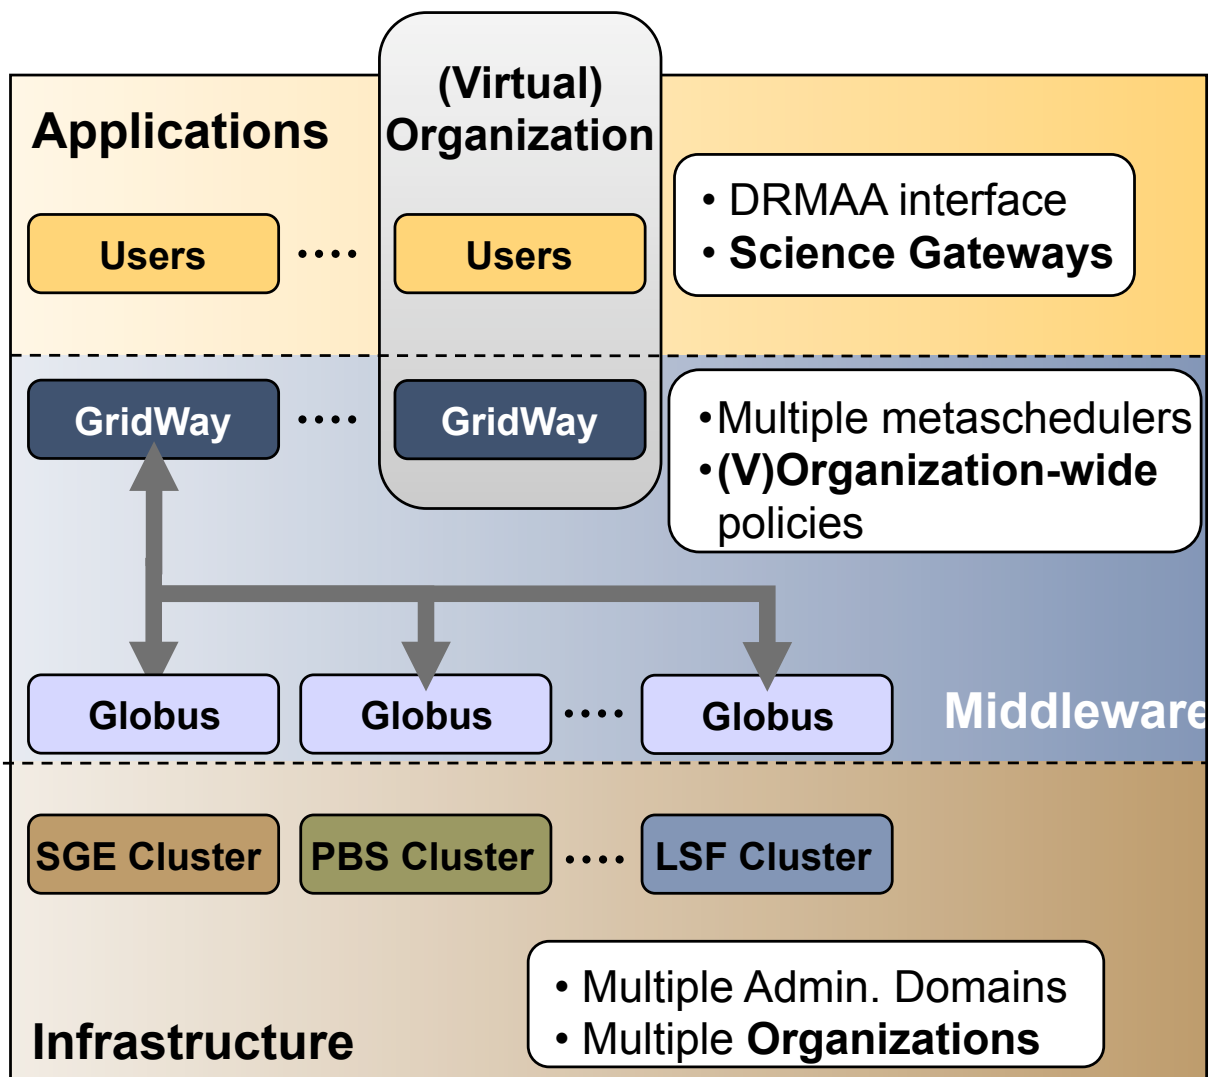

- Bioinformatics applications

# Partner Grids

## Architecture

## Examples

### EGEE-II

- gLite-LHC interoperability
  - Virtual Organizations
- Fusion: Massive Ray Tracing  
Biomed: CD-HIT (Workflow)

### AstroGrid-D, German Astronomy Community Grid

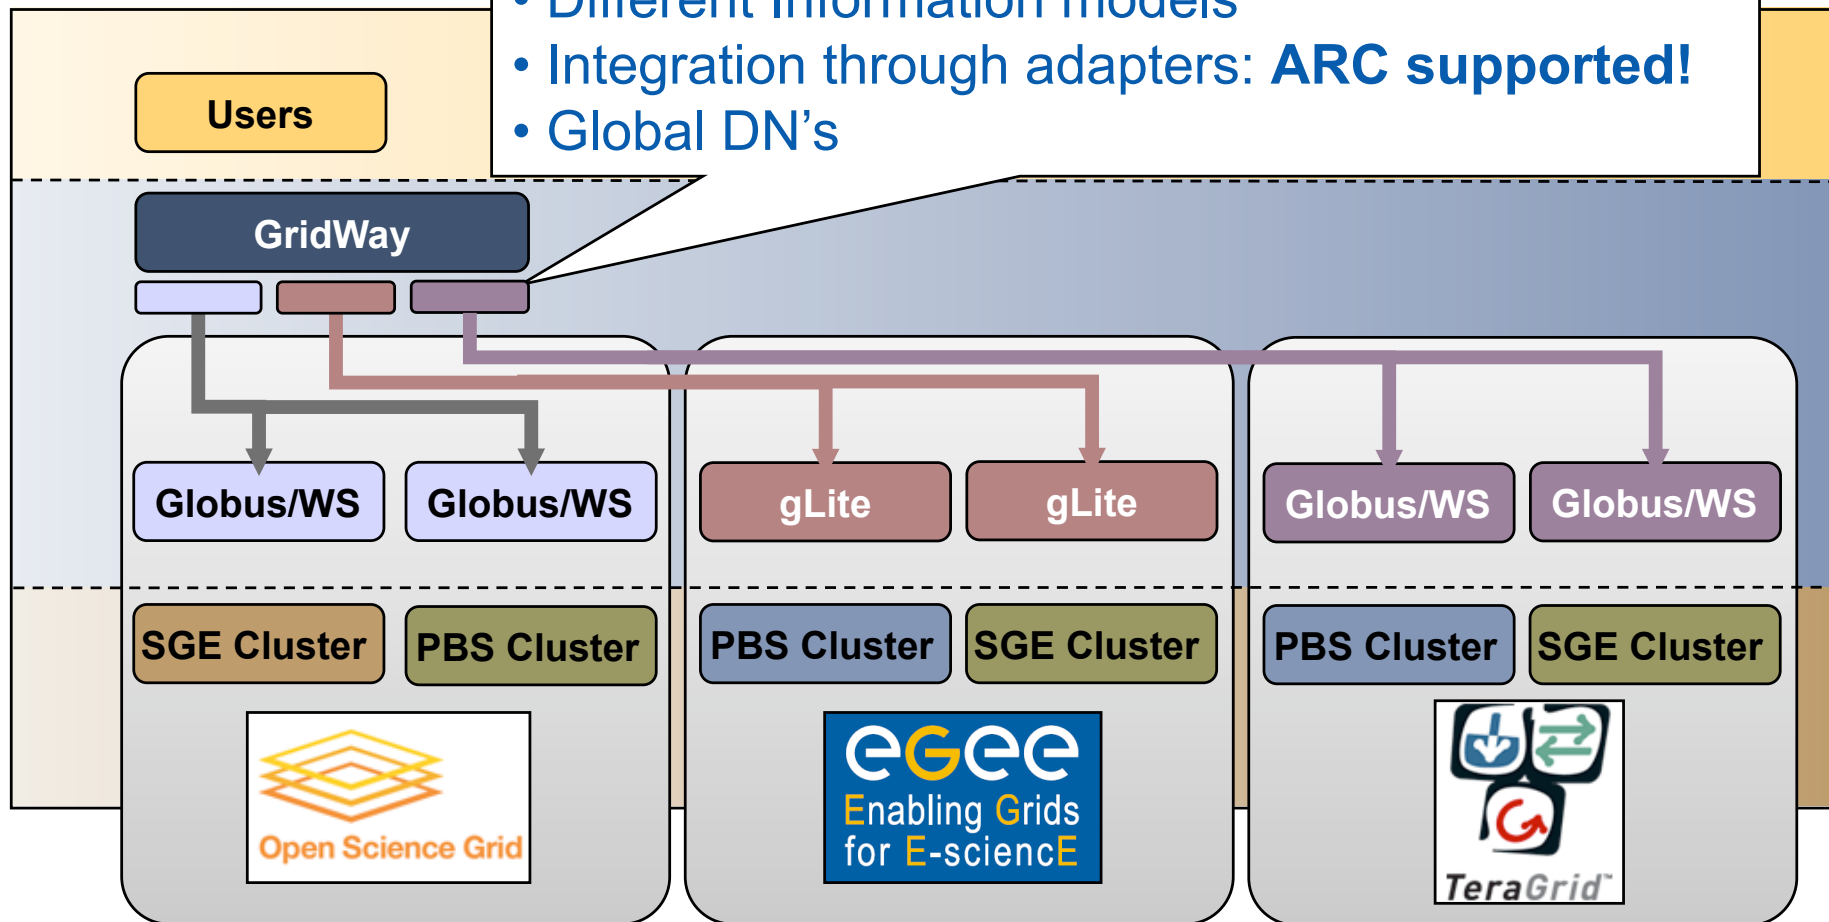

- Supercomputing resources
- Astronomy-specific resources
- GRAM interface

# GW in GT 4.2: Globus Interoperability

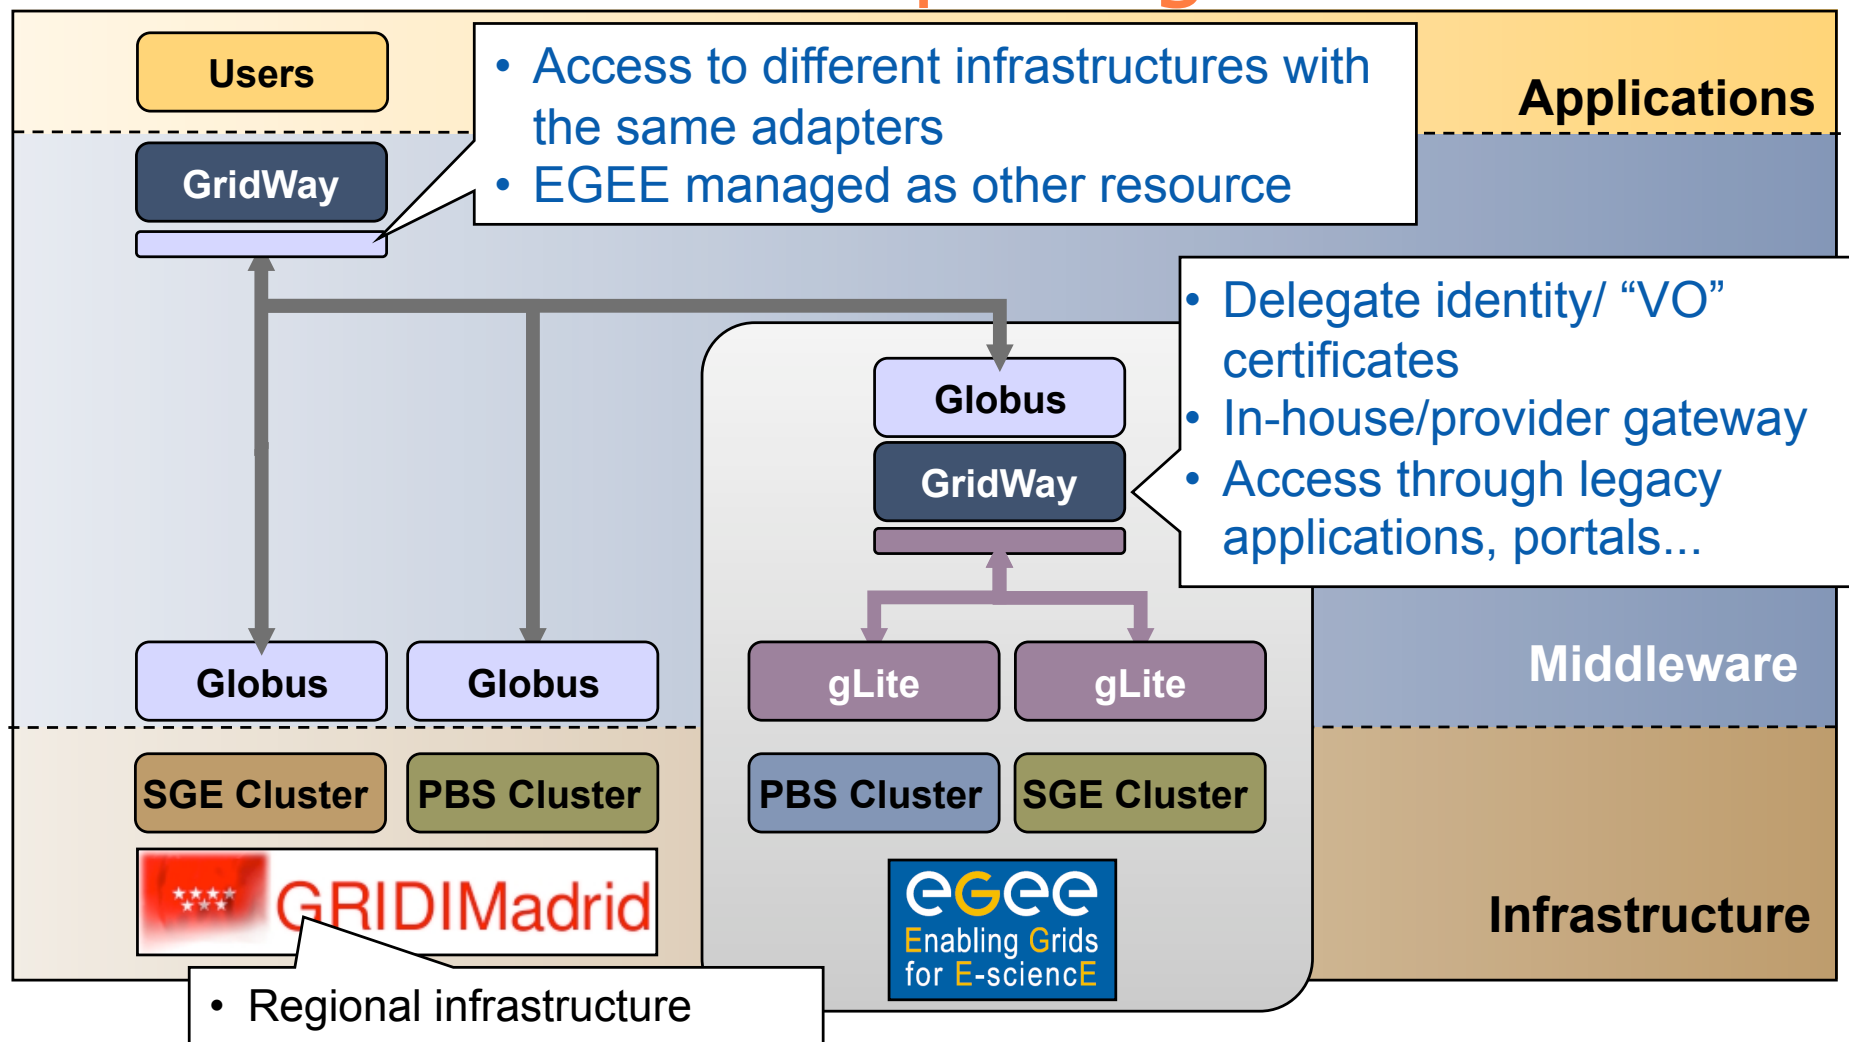

- Different Middlewares (e.g. WS and pre-WS)
- Different Data/Execution architectures
- Different Information models
- Integration through adapters: **ARC supported!**
- Global DN's

# GW in GT 4.2: WSRF Interface for Utility Computing

# GW in GT 4.2:Application Support

## **New DRMAA bindings**

- Scripting languages Ruby, Python & Perl
- DRMAA 1.0 specification

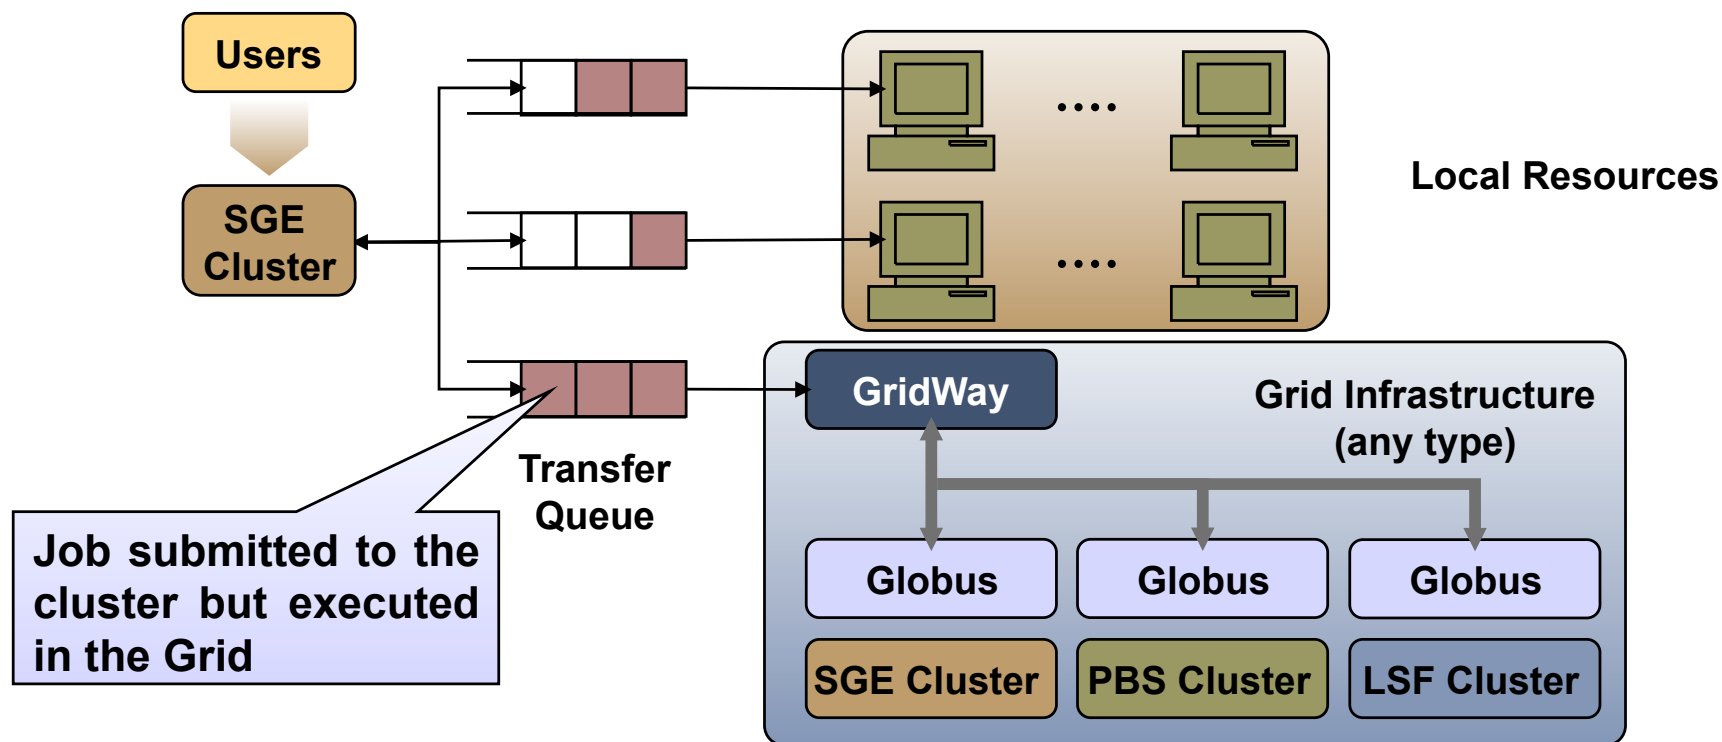

## **DAGMAN support**

- Submit DAGMAN files

# Transfer Queues

- Communicate LRM systems with meta-schedulers (the other way around)
- Users keep using the same interface, even applications (e.g. DRMAA, site scripts...)
